

How do you ensure your employees and customers feel protected?

Change Assumptions to Facts.

How much thought, in the recent past, were you really giving to the cleanliness of the places you frequent? Hotels, restaurants, retail locations? I mean, yeah, it was a fleeting thought, an assumption of cleanliness or uncleanliness (think remote control or kiosk stories).

All in all, we had a pretty good idea of what we could expect.

Bring on COVID-19.

All our assumptions of cleaning and sanitizing have been challenged and our expectations have skyrocketed.

Comfort and Confidence

How do we deliver both comfort and confidence? Employees and customers need to see what has always been assumed. All the cleaning and sanitizing that went on behind the scenes must now be visible.

LED and UV-C Lighting Changes Assumptions to Facts

Give your employees and customers the confidence they need. Using LED and UV-C lighting creates a visual promise of protection to your customers and is a touchless sanitizing solution for your employees.

Science has validated the results. LED and UV-C lighting is killing bacteria and harmful pathogens from fabrics and surfaces. This technology is efficiently and effectively providing a solution to health concerns.

LET'S GET STARTED

Pin Pads & PCI Compliance

How many equipment failures have you recorded due to improper cleaning procedures of your pin pads? (You've seen it, liquids being sprayed directly on to the pin pads.)

Bailiwick has been busy replacing pin pads and we're happy to do it! That said, we know its expensive to keep replacing devices and increasingly difficult to find them!

Tip: Do not spray liquid disinfectants directly on to the device. Spray a cloth, then wipe the unit. Always read and follow the directions for use on the label of your disinfecting solution.

Did you know?

Covering the keys of the pin pad is non-PCI compliant. The use of overlays pose a security risk to both the merchant and the customer.

Pro Tip: Install a UV-C light above your pin-pad. A quick shot of Ultra-Violet light between customers will help sanitize the keys and demonstrate to your customers you are taking additional steps to help keep them protected.

AN **INDIVIDUALIZED & INTEGRATED** SOLUTION

Bailiwick is your true end-to-end partner. We'll have your back, from designing a great plan to maintaining a reliable solution.

Solution Design and Procurement

We speak all things LED and UV-C lighting. For real, give us a call and we're happy to tell you what we know! You're not in this alone!

Essential Supplier

Bailiwick has been recognized as an "essential supplier" as defined by the DHS. We can continue to serve no matter the circumstances.

Implementation

Bailiwick has an exceptional team of project managers and a flexible, nationwide labor force. Don't need the install piece? No worries, we are happy to help with equipment, maintenance and procurement

Bailiwick preferred equipment includes certification with the MET. The MET mark for product safety indicates compliance to required standards by virtue of Eurofins MET Labs' equivalent NRTL accreditation to UL.
