

Improve patient and visitor experience with EV charging stations.

The window to electrify early won't last forever. Capitalize with Bailiwick EV Charging Solutions.

Investing in an EV charging station is an investment in the future of your hospital or clinic. In 2022, 5.6% of all vehicles purchased in the US were electric. By 2030, there is projected to be 26.4 million electric vehicles on US roads. Increasingly, people will base their decisions on services they receive, including healthcare providers, on the availability of EV charging stations.

Today, EV charging stations are seen as an amenity that's nice to have.

Tomorrow, patients and visitors will require the presence of an EV charging station before considering a treatment destination. With thoughtful planning and the implementation of EV charging stations you'll make your hospital or clinic a preferred healthcare destination.

HOSPITALS | CLINICS

Create a valuable experience.

EV charging stations will set your facility apart from others by providing a valuable amenity to patients and guests.

Add a consistent revenue source.

When properly planned, an EV charging station can be an additional revenue source that requires little management time.

Be a sustainability leader.

Electric vehicles reduce carbon emissions, creating a more environmentally friendly option than internal combustion engines.

Electrify your business with Bailiwick.

The EV charging industry is accelerating. Bailiwick can help you adapt by providing EV charger planning and installation services.

With over 15,000 site installations, 1.5 million feet of electrical wiring installed and over 30 million pounds of concrete poured, Bailiwick has a proven track record for executing large-scale, multi-site installation projects. It's the kind of experience you can count on to handle the most important details for your technology-based projects.

With Bailiwick, you get a national network of expert installers and the robust infrastructure of IT integration support. Bailiwick performs complex installation projects throughout North America. With more than 25 years of IT infrastructure installations, we're ready to prepare your business for the future.

Bailiwick's Four-Phase Approach to EV Charging Installation

Bailiwick offers a fully integrated process for companies looking to add EV charging stations. Our four-phase approach ensures clients receive diligent care of their EV charging initiatives from the preliminary planning stage, through installation and maintenance.

Phase I:

Consultation

Meet with clients to understand their EV strategy and their goals and objectives.

Phase II:

Site Evaluation

Visit site to determine any infrastructure needs and develop a thorough installation plan.

Phase III:

Turnkey Installation and Activation

Bailiwick's on-site installation crew works along with our best-in-class project management team to ensure quality work at every step until activation.

Phase IV:

Maintenance and Repair

Our vast network of skilled technicians is a phone call away for maintenance and repair of damaged units.
